Authorization for this examiner's amendment was given in a telephone interview with Lenwood Falcon and James Oliff on 4/18/2008.

The application has been amended as follows:

In Claim- 3, Line-2, After 'claim' **DELETE** '11' and **REPLACE** with --35--

In Claim-17, Line-2, After 'claim' **DELETE** '11' and **REPLACE** with --35--

In Claim-30, Line-2, After 'claim' **DELETE** '15' and **REPLACE** with --37--

In Claim-30, Line-4, **DELETE** the contents of the line in its entire entity.

**Cancel Claims 11, 13, 15, 33 and 34**

**Add New Claims 35-39**

**Claim 35.** --A manufacturing process of conductive composition including metal particles and ceramics particles, comprising the steps of:

providing undried metal particles having been water washed;

Art Unit: 1793

wetting undried said metal particles by a liquid solvent that is compatible with an organic component included in said conductive composition and is incompatible with water; and

colliding a first slurry including at least said wetted metal particles and said ceramics particles with a second slurry supplied along contrary different direction from the first slurry,

wherein an average particle size of said metal particles is  $0.5\mu\text{m}$  or less, and

wherein an average particle size of said ceramics particles is a quarter of or less than the average particle size of said metal particles.--

**Claim 36.** --A manufacturing process of conductive composition including metal particles and ceramics particles, comprising the steps of:

providing undried metal particles having been water washed;

wetting undried said metal particles by a liquid solvent that is compatible with an organic component included in said conductive composition and is incompatible with water; and

colliding a first slurry including at least said wetted metal particles and said ceramics particles with a second slurry supplied along contrary different direction from the first slurry,

wherein an average particle size of said ceramics particles is less than that of said metal particles, and

wherein an average particle size of said metal particles is  $0.5\mu\text{m}$  or less.--

**Claim 37.** --A manufacturing process of conductive composition including metal particles and ceramics particles, comprising the steps of:

providing undried metal particles having been water washed;

wetting undried said metal particles by a liquid solvent that is compatible with an organic component included in said conductive composition and is incompatible with water; and

colliding a first slurry including at least said wetted metal particles and said ceramics particles with a second slurry supplied along contrary different direction from the first slurry,

wherein said metal particles are Ni or Ni content compound, and

wherein an average particle size of said metal particles is  $0.5\mu\text{m}$  or less, and

wherein an average particle size of said ceramics particles is a quarter of or less than the average particle size of said metal particles.--

**Claim-38.** --A manufacturing process of conductive composition including metal particles and ceramics particles, comprising the steps of:

providing undried metal particles having been water washed;

Art Unit: 1793

wetting undried said metal particles by a liquid solvent that is compatible with an organic component included in said conductive composition and is incompatible with water; and

colliding a first slurry including at least said wetted metal particles and said ceramics particles with a second slurry supplied along contrary different direction from the first slurry,

wherein an average particle size of said metal particles is  $0.5\mu\text{m}$  or less, and

wherein an average particle size of said ceramics particles is a half of or less than the average particle size of said metal particles.--

**Claim 39.** --A manufacturing process of conductive composition including metal particles and ceramics particles, comprising the steps of:

providing undried metal particles having been water washed;

wetting undried said metal particles by a liquid solvent that is compatible with an organic component included in said conductive composition and is incompatible with water; and

colliding a first slurry including at least said wetted metal particles and said ceramics particles with a second slurry supplied along contrary different direction from the first slurry,

wherein said metal particles are Ni or Ni content compound; and

Art Unit: 1793

wherein an average particle size of said metal particles is 0.5 $\mu$ m or less, and

wherein an average particle size of said ceramics particles is a half of or less than the average particle size of said metal particles.--

**END of THE AMENDMENT**

The newly added claims 35-39 replace the cancelled claims 11, 13, 15, 33 and 34 respectively, because of the extensive nature of the amendment needed and to avoid confusion in the amendment.

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Claims 3, 17, 26, 30 and 35-39 are allowed as amended.

The prior art of record neither teaches nor fairly suggestive of a method of making the conductive composition by the method steps and the materials processed therein. An updated search did not result in any new prior art of record that either teaches or fairly suggest applicant's process. The claims are allowed over the unexpected superior results in the data provided in the table in the specification.

The examiner construes the phrase "undried metal particles having water washed" in the claims to be metal particles that were never dried which were washed with water. The examiner further construes the limitation of "ceramics particles is a quarter of or less" in claims 35 and 37 to encompass the range  $x \leq 0.25M$ , where x-particle size of ceramics in micron and M is the particle size of metal particle in micron. The examiner also construes the limitation of "ceramics particles is a half of or less" in claims 38 and 39 to encompass the range  $x \leq 0.50M$ , where x-particle size of ceramics in micron and M is the particle size of metal particle in micron.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KALLAMBELLA VIJAYAKUMAR whose telephone number is (571)272-1324. The examiner can normally be reached on M-F 07-3.30.
